

BENEFITS OF SOLAR LIGHTING

- Parks are generally safer when well lighted
- Provides energy to the park in the evening hours
- Helps extend useful hours to the park for people that work late
- Allows people to use the park in the evening to avoid the hot months daytime heat
- Provides a unique social setting for dogs and owners to be in 'arena' like setting
- Each light is programmed through its own control system, to turn on and off as needed. And, in the unlikely event that an individual solar outdoor light fails, no other lights are affected.
- Solar power products have few moveable parts which means that fewer parts exist to break. They last for a long time and require little attention once installed.
